

Mindjet on-premise: Seamlessly integrate with SharePoint to maximize enterprise productivity.

KEY FEATURES:

- SharePoint-based mapping client
- Map sharing
- Embedded SharePoint web part
- SharePoint task linking
- Send tasks from map to SharePoint, with bi-directional data syncing
- Attach documents, insert hyperlinks, tasks, locations and searches
- Secure Save compliant with SharePoint Security settings

Mindjet on-premise enhances Microsoft® SharePoint®, delivering a powerful solution that lets those with shared goals get more done using the file storage, user access control, task and calendar management capabilities of Microsoft SharePoint. Mindjet on-premise enhances the SharePoint platform by providing:

- ▶ A simpler way to navigate SharePoint sites and lists by creating shared visual dashboards that aggregate and display SharePoint assets.
- ▶ An intuitive visual framework that helps people capture and organize ideas and information to help teams solve problems, prioritize strategies, plan projects and process information together.
- ▶ A better way for individuals to create visual project plans and organize their tasks from a single view in SharePoint.
- ▶ Reduced support issues caused by user difficulty in finding information within SharePoint. Fully leverages Microsoft infrastructure for security, compliance, governance, and business process management.

TECHNICAL REQUIREMENTS:

Microsoft SharePoint (on server)

SharePoint 2007 or 2010, including the free WSS 3.0 and SharePoint Foundation 2010-only installations – SharePoint 2010 is recommended.

Adobe Flash Player (for client)

Flash 10 (or above)

Browser

Internet Explorer 8 & 9
Recommended, Firefox 17 & 18

Operating System

Windows XP and Windows 7

Enhanced Collaboration

Mindjet on-premise allows anyone with access to SharePoint to read, edit and create new maps using the access controls of SharePoint. This means administrators don't need to provide additional controls and individuals don't need to download software. Embedded maps in SharePoint sites enable users to find information, documents, and locations in an intuitive, visual manner.

- ▶ Maps can be accessed without any additional software downloaded by the user
- ▶ Easy map viewing and editing in the browser

Engage and Align Teams and Decision-Makers

Mindjet on-premise enables users to go from project inception to execution. They can easily create and manage project dashboards that show task status by individual, and can be refreshed by links to SharePoint sites.

- ▶ Search, filter and present SharePoint tasks specific to a user so that they and their manager can stay on top of projects and items due.

- ▶ Create project plans and tasks that can be sent into SharePoint, allowing users to make plans once, and stay on top of their progress. Plan topics and SharePoint tasks are linked, so that changes made in the topic are reflected in the task and vice versa.

The Power of Visualization

An intuitive visual framework that helps people capture and organize ideas and information to help teams solve problems, prioritize strategies, plan projects and process information together.

- ▶ Visualize and present important SharePoint locations, tasks, and documents in an intuitive navigational map.
- ▶ Map goals, issues and requirements to help everyone see information in context.
- ▶ Map out tasks, schedules and resource assignments to clarify workflows and ensure alignment.
