What's Included in MindManager Enterprise

- MindManager for Windows desktop software, including built-in "Linker" capabilities for connecting and synchronizing with Microsoft SharePoint
- MindManager for Mac desktop software
- MindManager Viewer for Windows, which enables rich map viewing, filtering and more
- MindManager Reader for either Windows or Mac, which enables anyone to open native MindManager files in an easy-to-use viewer
- MindManager software for SharePoint servers (for map sharing via SharePoint)
- Other benefits due to our MindManager Enterprise License Program with Mindjet Software Assurance and Support (MSA) include volume pricing, service, and support

Productivity, Communication and Collaboration

Brainstorming, organizing information, creating presentations, developing strategic plans, and coordinating projects with mind maps, flowcharts and other diagrams increases clarity and understanding. Improve analysis, communication and decision-making with MindManager mind maps and diagrams.

With MindManager Enterprise, sharing options include:

- The HTML5 universal file export that can be opened on any browser
- The MindManager Reader for Windows or Mac, which enables anyone in the organization to view and interact with MindManager files.
- Export to Microsoft Office and Project.
- Share MindManager maps within SharePoint or Box

Visual Project and Process Management

Successful project and process management depends on effective management of expectations and commitments. MindManager Enterprise helps keep teams in alignment on the decisions and tradeoffs that determine if projects and re-engineered processes will meet goals and deadlines.

- Create a blueprint for success by defining goals, prioritizing issues, capturing stakeholder input, reviewing budgets, and validating requirements - all in one application.
- Create detailed flowcharts and other diagrams to plan process improvements.
- Gain commitment on assignments and due dates in MindManager for Windows, then take advantage of bidirectional synchronization with SharePoint task management to coordinate project implementation.

Information and Knowledge Management

Finding and utilizing information in corporate repositories can be challenging. Capturing and sharing the expertise of valued employees can be even more difficult.

MindManager Enterprise can help:

- Create knowledge maps that display notes, attachments, and links to illustrate and document key business processes.
- Develop shared information maps that consolidate files stored across SharePoint sites, other content repositories, and on the web, making it easy for people to quickly find the information they need.
- Individuals can easily search SharePoint sites and incorporate SharePoint data into MindManager maps. Content search, filtering, and indexing features in MindManager make it easier to work with large amounts of information.
